TITLE : CHIP TYPE RESISTOR AND ITS
MANUFACTURE

ABSTRACT : PURPOSE: To greatly improve the accuracy in the resistance value adjustment by trimming, in a chip type resistor whose size is small.

CONSTITUTION: The resistor formed between electrodes is made up of a first unit resistor and a second resistor, which are in parallel with each other, and first trimming is applied to the resistor having a smaller resistance so as to roughly adjust the resistance value, and then trimming is applied to the unit resistor having a larger resistance so as to perform fine adjustment of resistance value.
